Problem 1

The proposed algorithm converges within 303 seconds and on the 82th iteration for $\lambda = 1$, i.e. in the case when the dampening is not used. In case when $\lambda = 0.5$ the number of iterations is twice larger, namely 165, and the time of convergence is 598 seconds.

Matlab Code

```

1  global l L c v delta rho beta kappa stop lambda;
2
3  l = 15;
4  L = 30;
5  c = zeros(L,1);
6  v = 10;
7  delta = 0.03;
8  rho = 0.85;
9  beta = 1/1.05;
10 kappa = 10;
11
12 stop = 1e-3;
13 lambda = 1;
14
15 %I also tried lambda = 0.5 as proposed in dampening procedure. The
    number of iterations to converge was twice
16 %larger
17
18 c(1:l)=kappa*[1:1:l]'.^(log(rho)/log(2)); %Constructing cost
    function
19 c(l+1:end) = kappa*(1^(log(rho)/log(2)));
20 tr_pr=zeros(L+1,L); %Constructing the state transition conditional

```

```

        on sales
21  for i=1:L+1
22      if i==1
23          tr_pr(i,1)=1;
24      elseif i==L+1
25          tr_pr(i,L)=1;
26      else
27          tr_pr(i,i-1)=1-(1-delta)^(i);
28          tr_pr(i,i)=(1-delta)^(i);
29      end
30  end

```

Matlab Code

```
1 function [d0,d1,d2] = Ds(p,p_1,v)
2 d0 = 1./(1+exp(v-p)+exp(v-p_1')) ;
3 d1 = exp(v-p)./(1+exp(v-p)+exp(v-p_1')) ;
4 d2 = exp(v-p_1')./(1+exp(v-p)+exp(v-p_1')) ;
5 end
```

Matlab Code

```
1 function [w0,w1,w2]=Ws(V,tr_pr)
2
3 s = size(tr_pr,1);
4 t_p = tr_pr;
5 tr_pr_0 = t_p(1:s-1,:);
6 tr_pr_1 = t_p(2:s,:);
7
8 w0 = tr_pr_0*V*tr_pr_0';
9 w1 = tr_pr_1*V*tr_pr_0';
10 w2=tr_pr_0*V*tr_pr_1';
11
12 end
```

Matlab Code

```
1 function f = FOC(V,p,p-1,L,c,beta,v,tr_pr)
2 c1 = repmat(c',L,1);
3 [d0, d1, d2] = Ds(p,p-1,v);
4 [w0, w1,w2] = Ws(V,tr_pr);
5 FOC=1-(1-d1).*(p-c1)-beta*w1+beta*(d0.*w0+d1.*w1+d2.*w2);
6 f = FOC;
7 end
```

Matlab Code

```
1 function [v,p,it] = VFI(V,P,stop,L,c,lambda,beta,v,tr_pr)
2
3 v_old = V;
4 p_old = P;
5 initial = P;
6 opt = optimset('Disp','None');
7 v_new = zeros(size(V));
8 p_new = zeros(size(P));
9 tol = 1;
10 i = 1;
11
12 while and(tol > stop, i < 1000)
13     f=@(p)FOC(v_old,p,p_old,L,c,beta,v,tr_pr);
14     p_new = fsolve(f,initial,opt);
15     [d0, d1, d2] = Ds(p_new,p_old,v);
16     [w0, w1, w2] = Ws(v_old,tr_pr);
17
18     v_new = d1.*(p_new-repmat(c',L,1))+beta*(d0.*w0+d1.*w1+d2.*w2);
19
20     tol = max(max(max(abs((v_new-v_old)./(1+v_new))))),max(max(abs((
        p_new-p_old)./(1+p_new)))));
21
22     v_old=lambda*v_new+(1-lambda)*v_old; p_old=lambda*p_new+(1-
        lambda)*p_old;
23
24     fprintf('Iteration:%d\n',i);
25     fprintf('Tolerance:%f\n',tol);
26     i=i+1;
27 end
28 v = v_old;
29 p = p_old;
30 it = i;
31 end
```

Matlab Code

```
1  tic;
2  Parameters;
3  V_0 = ( repmat(v,L,L) + repmat(c',L,1) )./(2*beta);
4  P_0 = 1.5*repmat(c',L,1);
5
6  [value, p, it] = VFI(V_0, P_0, stop, L, c, lambda, beta, v, tr_pr);
7
8  figure(1);
9  mesh(value);
10 title('Value Func');
11 xlabel('Firm1 Knowledge');
12 ylabel('Firm2 Knowledge');
13 zlabel('Value Func');
14 figure(2);
15 mesh(p);
16 title('Price');
17 xlabel('Firm1 Knowledge');
18 ylabel('Firm2 Knowledge');
19 zlabel('Value Func');
20 fprintf('Time:%f sec',toc);
```
